To Whom It May Concern,

This testimonial is in reference to Weatherdek.

In the capacity as Project Manager for Dilworth Homes I have been working with Weatherdek for approximately 3 years continuously on several multi-family projects as well as in private practise in excess of 15 years. Weatherdek has participated in a variety of our sub-divisions that we are currently developing including semi-detached homes, single family and multi-story apartment buildings. As the project Manager I have found them to be consistently reliable, efficient, professional and cooperative. The most important factor is their ability to communicate the needs and issues revolving the preparation of projects to maintain consistency as the project progresses.

They do whatever it takes to maintain schedules whether it is working with the suppliers or other trades involved. Job sites are managed clearly and decisively with their crews. The sites are kept clean, organized and leave a professional appearance. They review every project on an ongoing basis and relay information to me to further enhance the quality or methods of construction for review and implementation.

Weatherdek is committed to a strong safety program and they demonstrate a clear understanding of requirements as developed with WorkSafe BC. To date they have been accident free which is a testament to their commitment to all safety programs.

I look forward to a continued working relationship with Weatherdek

Sincerely,

Ray Wynsouw
